Credit Points

3 (Three)

Introduction

This program will provide a firm grounding in key aspects of the products' life cycle including, pre-registration, registration and post-registration regulatory requirements. It will provide pharmacists with an overview of national regulations in place for clinical trials, marketing authorization, post-market surveillance and pharmacovigilance with national and international perspectives.

Topics will include regulatory pathway and requirements for clinical trials, marketing authorization, post-market surveillance and pharmacovigilance.

Objectives

At the end of the course, pharmacists should be able to:

- Understand the requirements for the authorization and monitoring of clinical trials and management investigational products.
- Understand the procedures for granting Market Authorization for regulated products and the registration timelines.

- Obtain a clear and concise understanding of the role of the Food and Drugs Authority in processing application for the Marketing Authorization of pharmaceutical products.
- Have an overview of post registration changes requirements for all submissions (Variations)
- Appreciate the regulatory framework for post-market surveillance
- Understand the need for post approval safety monitoring and the pharmacovigilance system in Ghana

Methodology

Power point presentations and interactive discussion sessions including group work.

Target audience

Pharmacists involved in the Pharmaceutical Industry, Research, Hospital Practice, Community Pharmacists, Academia and Regulatory Affairs.
