1	GBT-2104-133	Phase III	Sickle Cell Disease	Inclacumab/ Monoclonal antibody	27 th August, 2021	Professor Alex Osei-Akoto	Komfo Anokye Teaching Hospital (KATH)	Global Blood Therapeutics, Inc.	Application Pending Approval 7years 5 months	The primary objective of this study is to evaluate the long-term safety of every 12- week dosing of inclacumab in participants with sickle cell disease (SCD) who have completed a prior inclacumab clinical trial. Additional objectives are to evaluate the incidence of vaso-occlusive crises (VOCs), hospitalizations, missed work/school days, red blood cell (RBC) transfusions, and quality of life (QoL) with long-term use of inclacumab.
	NOVIC TRIAL	Phase III	Postpartum Hemorrhage (PPH)	Jada System (Intrauterine Vacuum Induced Hemorrhage Control Device)/ Medical device	5th April 2022	Dr. Samuel A. Oppong	1. Korle-Bu Teaching Hospital (KBTH) 2. Komfo Anokye Teaching Hospoital (KATH)	Women and Infants Hospital		Study Objectives 1. To evaluate the effectiveness of the Jada® System, compared to standard care, in treating PPH, as measured by maternal survival without surgical intervention. 2. To assess the safety of the Jada® System, compared to standard care, in treating PPH, as measured by rate of composite adverse events potentially related to the device, including genital tract injury, uterine perforation or rupture and endometritis. 3. To estimate the cost-effectiveness of the Jada® System, compared to standard care, in treating PPH, as measured by incremental cost per quality- adjusted life year.
	VERTEX Trial	Phase II/III	(FPD) Kidney Disease	VX-147/	23rd December 2022	Professor Sampson Antwi	Komfo Anokye Teaching Hospital (KATH)	Vertex	Application approved, 4 years	Primary objectives •To evaluate the efficacy of VX-147 to reduce proteinuria •To evaluate the efficacy of VX-147 on renal function as measured by eGFR slope Secondary objectives •To evaluate the efficacy of VX-147 to decrease the risk of the composite clinical outcome •To evaluate the safety and tolerability of VX-147 •To identify the optimal dose from Phase 2 to carry forward to Phase 3 •To characterize the plasma pharmacokinetics (PK) of VX-147
4	SWIS (STERILE WATER INJECTION)	Feasibility study	Lower Back Pain	Sterile Water Injection	6th December 2022	Prof. Sue Kruske	Korle-Bu Teaching Hospital (KBTH)	Dr. Jonas Awuku Afari	Application approved, 40 Months	Main Aim This study explores the feasibility, acceptability, and outcomes of implementing sterile water injections (SWI) for the management of lower back pain among birthing women in Ghana. Specific Objectives 1. Develop and deliver a training package for midwives on sterile water injections for managing lower back pain. 2. Undertake implementation study in a tertiary hospital in Ghana to assess the feasibility and acceptability of implementing SWI for lower back pain. 3. Determine birth and neonatal outcomes of women with back pain who receive SWI 4. Explore the experiences and perception of midwives and stakeholders regarding the implementation of SWI for managing back pain in labour

N/O	TITLE OF STUDY	PHASE	DISEASE	Products (IPs)/IP CLASS	,DATE OF RECEIPT OF APPLICATION	PRINCIPAL INVESTIGATOR	STUDY CENTRE(S)	SPONSORS & APPLICANT	STATUS & DURATION OF STUDY	PURPOSE/AIM OF STUDY
		Phase III	Covid-19	S-217622/	27th September 2022	Dr. Patrick Ansah	1. Kumasi Centre for Collaborative Research (KCCR) 2. Kintampo Health Research Centr (KHRC) 3. Navrongo Health Research Centre	SHIONOGI INC.& Co Ltd		Primary Objective To determine if S-217622 will reduce the time to sustained symptom resolution through Day 29. Time to sustained symptom resolution is defined as the time from start of study intervention to the first day of 4 consecutive days with complete resolution of 13 COVID-19 symptoms on participant self-assessment AND alive and without hospitalization for any reason by Day 29. Hospitalization is defined as ≥24 hours of acute care, in a hospital or similar acute care facility, including emergency rooms, urgent care clinics, or facilities instituted to address medical needs of those with COVID-19. Secondary Objectives Key secondary objective: To determine the effect of S-217622 compared with placebo on the change from baseline in quantitative log10 SARS-CoV-2 RNA levels by PCR on NP swab at Day 4. Key secondary objective: To determine whether S-217622 reduces COVID-19 related hospitalization (adjudicated) and all deaths regardless of occurrence outside of hospital or during hospitalization (not adjudicated) through Day 29.
6	COPE TRIAL	Phase III	Fistula	(i) Healeanlo silicone lady Drain Valve menstrual Cup (ii) Foley catheter will connect the cup to a leg bag (cup+)/ Medical device	2nd September 2022	Dr. Gabriel Y.K. Ganyaglo	1. Mercy Women's Catholic Hospital in Mankessim 2. Tamale Fistula Center in Tamale	Korle Bu Teaching Hospital	Application Approved, 15 Months	The aims of the study are to examine the effectiveness, comparative effectiveness, and acceptability of two vaginal menstrual cup models (cup and cup+) as a temporizing alternative to managing urinary leakage from vesico- vaginal fistula in both a clinical setting and a community setting, and to quantify non-surgical fistula management costs.
7	PRAISE	Phase II/III	Sickle Cell Disease	1. Oral FT-4202 Pyruvate Kinase Activator 2. Placebo/Allopathi c drug	2nd June 2022	Dr Prince Agyapong	1. Kintampo Health Research Center 2. Ghana Institute of Clinical Genetics, KBTH	NOVO NORDISK COMPANY	Application Approved, 43 Months	Objectives of the study are: 1. To assess the efficacy of FT-4202 in adolescents and adults with SCD as compared to placebo as measured by improvement in hemoglobin (Hb) 2. To assess the efficacy of FT-4202 as compared to placebo on the annualized vaso-occlusive crisis (VOC) rate 3. To measure the effects of FT-4202 on clinical measures and sequelae of hemolysis 4. To evaluate the effects of FT-4202 on the sequelae of VOC 5. To asses changes in fatigue of sickle cell patients taking FT-4202
8	FORTIFIED BUILLON CUBES		Malnutrition	Shrimp Flavour Stock Cubes/Food supplement	13th December 2021	Prof. Seth Adu-Afarwuah	University of Ghana	Helen Keller International (Through a grant from the Bill & Melinda Gates Foundation)		This study aims to assess the impacts of household use of multiple micronutrient- fortified bouillon cubes (contaning vitamin A, folic acid, vitamin B12, iron, and zinc in addition to iodine), compared to control buillon cubes fortified with iodine only, on: a) Micronutrient status among women 15-49 years of age and children 2- 5 years of age after 9 months of intervention b) Haemoglobin concentrations among women 15-49 years of age and children 2- 5 years of age after 9 months of intervention. c) Breast milk micrinutrient among lactating women 4-8 months postpartum after 3 months of intervention.
9	ANTIPSYCHOTI C STUDY	Phase IV	Antipsychotic Induced Movement Disoders	Omega-3 Fatty Acids / Food supplement	15th December 2021	Debrah Akosua Bema	Accra Psychiatric Hospital	Dr. Sammy Ohene. P. O. Box KB 77 Korle- Bu	Application Approved, 29 Weeks	The primary objective of this study is to determine the use of once daily dose of 1000mg omega 3 fish oil as a clinically effective and safe intervention for reducing the burden associated with antipsychotic induced movement disorders. Secondary: To determine the demographic and clinical characteristics of psychiatric patients with antipsychotic induced movement disorder. To determine the efficacy of omega 3 supplementation in relieving the symptoms of AlM disorders To evaluate the impact of omega 3 supplementation on the clinical outcomes of psychosis, cognitive function and quality of life/ adherence of participants. To determine the experiences of patients who have used other complementary and alternative medicines aside omega 3 fish oil as adjunct to conventional therapy, in an attempt to be free from their symptoms

10	PROBIOTIC		Malnutrition	1. Synbiotic (Nutraflora and Maltrin M100 P-95 and L. plantarum (Lp) 2. Placebo/ Food supplement	27th July, 2021	Dr Seyram Kaali	Kintampo Municipal Hospital	Dr. Kwaku Poku Asante		Primary A pilot trial to evaluate the administration of probiotic supplementation among pregnant women in the third trimester and effective colonization of the gut microbiome of their infants one-month post-partum. Secondary 1. To assess compliance of administering a synbiotic product (L. plantarum with Fructooligosaccharide) among pregnant women. 2. To assess if tho utcomes among participants who receive synbiotic products compared to those on placebo. 3. To assess if maternal stool microbiome profoundly changes from immediately after childbirth to one-month post-partum. 4. To characterize the diversity of vaginal microbiomes among pregnant women in the study area. 5. To determine the safety of the probiotic supplementation among pregnant women from 5 to 6 months until up to two weeks post partum.
11	EBSI-LSV	Phase I	Lassa Fever	1.EBSI-LSV 2. Placebo/ Vaccine	1st September 2021	1.Dr Seyram Kaali 2.Dr.Patrick Ansah	1.Kintampo Health Research Centre 2.Navrongo Health Research Centre	Emergent BioSolutions (EBS)		To evaluate the safety and tolerability of increasing dose levels of EBS-LASV vaccine administered as a single dose or two-dose series. To evaluate the humoral immune response to EBS-LASV vaccine at various dose levels and dosing schedules for the purpose of selecting two regimens (dose and schedule) for further evaluation in a Phase 2 study.
12	ASAAP	Phase III	Malaria	1. Artemether Lumefantrine 2. Atovaquone- Proguanil 3. Placebo of Atovaquone- Proguanil/ Allopathic drug	4th October 2021	1. John Humphrey, AMUASI 2. Dr Ournou Maiga Ascofare	St. Francis Xavier Hospital	Kumasi Centre for Collaborative Research (KCCR), Kumasi, Ghana	Application ApprovedI	The overall aim of this phase III clinical trial(main study = study II) is to develop a readily deployable highly efficacious, safe and well tolerated antimalarial triple combination therapy for young children. This is achieved by evaluating the efficacy, safety and tolerability of artemether-lumefantrine (AL) + atovaquone-proguanii (AP) tri-therapy (AL+AP) compared to standard AL therapy (+placebo) for the treatment of uncomplicated Plasmodium falciparum malaria in African children aged 6 to 59 months
13	POLYPHENOL- RICH COCOA POWDER TRIAL	Phase III	Covid-19	Polyphenol-rich natural cocoa powder/ Food supplements	10th January 2022	Prof. George Obeng Adjei	Ga East Municipal Hospital, Ghana Infectious Disease Centre	Ghana Cocoa Board		General objective is to evaluate effects of polyphenol-rich cocoa as adjuvant therapy in COVID 19 patients. Specific objectives: 1. to determine the effects of natural polyphenol-rich natural cocoa powder (5 % v/w) (as adjuvant therapy) on symptom resolution and illness duration in COVID-19 patients 2. to determine the effects of natural polyphenol-rich natural cocoa powder (5 % v/w) on vicologic clearance COVID-19 patients 3. to determine the effects of natural polyphenol-rich natural cocoa powder (5 % v/w) on vicologic clearance COVID-19 patients 4. to determine the effects of natural polyphenol-rich natural cocoa powder (5 % v/w) on disease prognosis COVID-19 patients
14	PIVOT STUDY	Phase II	Sickle Cell Disease	1.Hydroxyurea 2.Placebo/ Allopathic drug	18th June 2021	Dr. Yvonne A. Dei- Adomakoh	Korle-Bu Teaching Hospital	Cincinnati Children's Hospital Medical Center		To measure the toxicities of hydroxyurea treatment on laboratory parameters. To assess the effects of hydroxyurea treatment on a variety of sickle-related clinical and laboratory parameters in a large cohort of children and adults with HbSC disease. To identify which study endpoints are suitable for a future Phase III trial of patients with HbSC disease receiving hydroxyurea therapy.
15	RECOVERY	Phase III	Covid-19	1.Dexamethasone 2.Empagliflozin	21st May, 2021	Dr. John H. Amuasi	Komfo Anokye Teaching Hospital Ghana Infectious Disease Centre	University of Oxford Clinical Trials and ResearchGover nance.		For each pairwise comparison with the 'no additional treatment' arm, the primary objective is to provide reliable estimates of the effect of study treatments on all- cause mortality at 28 days after randomisation (with subsidiary analyses of cause of death and of death at various timepoints following discharge). The secondary objectives are to assess the effects of study treatments on duration of hospital stay; and, among patients not on invasive mechanical ventilation at baseline, the composite endpoint of death or need for invasive mechanical ventilation or ECMO.

	VR-AD-1005 STUDY	Phase II	Cholera	VR-AD- 1005/Allopathic drug	1st July 2021	Dr. Ernest Kenu	Pentecost Hospital, Madina, Madina Polyclinic –	Vanessa Research Holdings, Inc.,	Application Approved.Study not yet commenced 1 year 2 months	To assess the efficacy and safety of VR-AD-1005 for the treatment of acute diarrhea in cholera in combination with standard rehydration treatment with or without antibiotics (as indicated by WHO or other applicable guidelines) versus standard treatment alone. Efficacy is measured as reduction in stool output and/or duration of diarrhea between the start of treatment until final diarrheal stool before recovery or end of study treatment (treatment duration 120 hours).
17	HOPE KIDS 2	Phase III	Sickle Cell Disease	1.Voxelotor 2.Placebo/Allop athic drug	16th December 2020	Dr. Catherine Segbefia	•Korlebu Teaching Hospital Department of Child Health •Sickle cell office Directorate Child(KATH)	Global Blood Therapeutics, inc	Application Approved. Study not yet commenced 38 Months	The purpose is to evaluate the effect of voxelotor compared to placebo on the transcranial Doppler(TCD) time-averaged mean of the maximum velocity(TAMMV) arterial cerebral blood flow at 24 weeks in SCD participants >2 to <15 years of age with conditional (170 to <200cm/sec) TCD flow velocity.
18	3 VAT00008	Phase III	Covid-19	1.SARS-CoV2 prefusion Spike delta TM with AS03 adjuvant, monovalent 2.SARS-CoV2 prefusion Spike delta TM with AS03 adjuvant, bivalent 3.Matching placebo / Vaccine	26th May, 2021	Dr. Kwaku Poku Asante	*Navrongo Health Research Centre *Kintampo Health Research Centre *Kwame Nkrumah University of Science and Technology (KNUST)	SANOFI	Application Approved. Actively Enrolling at KCCR and Navorongo while Kintampo closed enrolment 18 months	To assess, in participants who are SARS-CoV-2 naïve, the clinical efficacy of the CoV2 preS dTM-AS03 vaccines for the prevention of symptomatic COVID-19 occurring ≥ 14 days after the second injection.To assess the safety of the CoV2 preS dTM-AS03 vaccines compared to placebo throughout the study.
19	BURULIRIFDAC	Phase III	Buruli Ulcer	1.Rifampicin 2.Clarithromycin 3.Dialkylcarbam oyl chloride (DACC) Dressing/Allopathi c drug	12th December 2020	Prof. Richard Phillips	•KCCR •Ca East munical hospital •Pakro Health Centre •Wassa Amenfi East Hospital	London school of Hygiene and Tropical Medicine		Compare the time to clearance of viable Mycobacterium from wounds of patients treated with high-dose rifampicin and DACC dressings (HR-DACC) to those receiving standard dose rifampicin and DACC dressings
20	EMODEPSIDE	Phase II	Onchocerciasis	Emodepside (5mg)/ Allopathic drug	5th November, 2020	Dr. Nicholas Opoku	School of Public Health Research Centre, (UHAS). -Municipal Hospital, Hohoe, Volta Region, Ghana -Kpassa, Nkwanta- North District, Oti Region, Ghana	DNDi (Drugs for Neglected Diseases initiative)	Application Approved.Study commenced 67 months	The purpose of this study is to *Ensure the safety and tolerability of emodepside after single oral doses administered as solution (liquid service formulation, LSF) or immediate release (IR) tablets in healthy male subjects *Plasma PK of emodepside (solution and tablets), the effect of food on the bioavailability of emodepside
21	BURULINOX	Phase III	Buruli Ulcer	1.Nitric Oxide generating dressing (EDX110TM) 2.Vaseline Gauze dressing materials / Allopathic drug + medical device	24th September 2018	Prof. Richard Odame Phillips	1. Kumasi Centre for Collaborative Research in Tropical Medicine 2. Agogo Presbyterian Hospital 3. Tepa Government Hospital 4. Dunkwa Government Hospital	Kumasi Center For Collaborative Research (KCCR)	Application Approved Study yet to commence 36 MONTHS	Buruli ulcer is a neglected disease caused by infection with Mycobacterium ulcerans (Mu), which manifests as large, disfiguring skin ulcers mainly in children aged 5 to 15 years. Access to treatment in rural areas can be challenging and late presentation is typical, due to fear, stigma, suspicion about conventional medicine and economic consequences for poor families. The current recommended regimen of oral rifampicin together with intramuscular streptomycin or clarithromycin for 8 weeks is far from ideal, particularly given the increasing global threat of antimicrobial resistance. Although the disease can be cured in most patients who adhere to this regimen, healing rates are highly variable even in patients with seemingly similar lesions. The purpose of the study is to compare the healing measured by the percentage area reduction of EDX110 dressing with oral rifampicin and clarithromycin (EDX- RC) versus 'Usual Care' with routine Vaseline gauze dressing and oral rifampicin and clarithromycin (VG-RC).

	22	Tyvegha	Phase IV	Typhoid fever	1. Typbar TCV (Vi polysaccharide tetanus toxoid conjugate vaccine) 2. Meningococca I Group A conjugate vaccine (MCV-A 5) / Vaccine	3rd March 2021	Prof. Ellis Owusu-Dabo	Agogo Trial Center/KNUST- International Vaccine Institute (IVI) Collaborating Center	International Vaccine Institute	Application Approved Study commenced 3 Years 5 months	The purpose of the study is to *To determine the total protection conferred by single-dose vaccination with Vi-TT against blood culture-confirmed symptomatic S. Typhi infection in the intervention vaccine clusters, compared with the control vaccine clusters • To investigate the safety outcomes associated with Vi-TT vaccination in the intervention vaccine recipients compared with the comparator vaccine recipients • To determine the overall protection of Vi-TT vaccination against blood culture- confirmed symptomatic infection caused by S. Typhi in intervention clusters compared with control clusters • To determine the total protection of Vi-TT vaccination against severe TF in the intervention vaccine recipients compared with the comparator vaccine recipients • To determine the total protection of Vi-TT vaccination against severe TF caused by S. Typhi in intervention clusters • To investigate the total protection of Vi-TT vaccination against clinical TF (defined below in "Trial Outcome Measures") in the intervention vaccine recipients • To investigate the overall protection of Vi-TT vaccination against clinical TF in intervention clusters compared with control clusters • To investigate the overall protection of Vi-TT vaccination against clinical TF in intervention clusters compared with control clusters • To investigate the overall protection conformed by single-dose vaccination with Vi- TT against blood culture-confirmed symptomatic S. Typhi infection in the intervention vaccine clusters, compared with the control vaccine clusters • To investigate the immunogenicity profile in a subset of Vi-TT recipients compared with the comparator vaccine recipients.
	23	SPUTNIK LIGHT	Phase III	Covid-19	1.Sputnik Light Vector Vaccine 2.Placebo/ Vaccine	5th March 2021	1. Dr. Nana Akosua Ansah 2. Dr. Alberta Amu	1. Navrogo Health Research 2. Centre Dodowa Health Research Centre Ghana	Human Vaccine LLC	Application Approved Enrolment closed participants are in follow up 8 months	The purpose of the study is to • Assess efficacy of the Sputnik-Light vector vaccine against the SARS-CoV-2- induced coronavirus infection compared to placebo • Assess tolerability and safety of the Sputnik-Light vector vaccine against the SARS-CoV-2-induced coronavirus infection compared to placebo • Assess humoral immunogenicity of the Sputnik-Light vector vaccine against the SARS-CoV-2-induced coronavirus infection compared to placebo on Subset A . • Assess protective properties of the Sputnik-Light vector vaccine against the SARS-CoV-2-induced coronavirus infection compared to placebo on Subset A . • Assess protective properties of the Sputnik-Light vector vaccine against the SARS-CoV-2-induced coronavirus infection compared to placebo for prevention of serologically confirmed SARS-CoV-2 infection • Assess efficacy of the Sputnik-Light vector vaccine against the SARS-CoV-2- induced coronavirus infection compared to placebo based on severity of COVID- 19 disease
		SHEA LIDO	Phase III	Rectal Examination	1.Optilube Active Sterile Lubricating Jelly 2.Shealube/ Lubricating gel	10th September 2020	Dr. Kekeli Kodjo Adanu	Ho Teaching Hospital	University of Health and	Application Approved Study commenced 12 months	This study is a randomized controlled trial which compares the effectiveness, complications and ease of use of shea butter as a surgical lubricant to lidocaine gel. The purpose is to: •To determine the ease of use of shea butter by clinicians as compared to lidocaine gel as a lubricant for rectal examination. •To determine the complication rate related to the use of shea butter as a lubricant for rectal examination. •To ascertain the complication rate associated with the use of lidocaine gel as a lubrication rectal examination. •To compare the complication rate related to the use of shea butter to that of lidocaine gel.
	25	CECOLIN	Phase III	Human Papiloma Virus (HPV)	1.Cecolin® 2.Gardasil® / Vaccin	1st September 2020	Prof. Tsiri Agbenyega	•Agogo Asante Akim North District	PATH	Application Approved 30 months	The purpose of this study is to demonstrate the non-inferiority of Cecolin® administered on 0, 6-month; 0, 12-month; and 0, 24-month two-dose regimens, to Gardasil® using a 0, 6-month two-dose regimen, based on HPV Immunoglobulin G (IgG) antibody levels measured one month after the last dose for HPV types 16 and 18.

				Investigational						
N/O	TITLE OF STUDY	PHASE	DISEASE	Products (IPs)/IP CLASS	,DATE OF RECEIPT OF APPLICATION	PRINCIPAL INVESTIGATOR	STUDY CENTRE(S)	SPONSORS & APPLICANT	STATUS & DURATION OF STUDY	PURPOSE/AIM OF STUDY
26	ASTAWOL	Phase II	Onchocerciasis/Fil ariasis	1.Rifampicin 2.Albendazole/ Allopathic drug	25th June 2020	Prof. Alexander Yaw Debrah	•Bawku west •Builsa South •Nabdam Fumbisi •Garu-Tempane •Kayoro	Kumasi Centre for Collaborative Research (KCCR), Kumasi, Ghana	Application Approved Actively Enrolling 24 months	The purpose of this study is to •To show efficacy (Depletion of Wolbachia) of the combination of Rifampicin plus Albendazole against lymphatic filariasis using PCR compared to treatment with albendazole and "no treatment" (other than ivermectin) - Lymphatic Filariasis (LF) trial •To show efficacy (depletion of Wolbachia and interruption of embryogenesis in female adult worms) of the combination of Rifampicin plus Albendazole, using PCR and immunohistology compared to treatment with albendazole and "no treatment" (other than ivermectin) - Onchocerciasis trial
27	MDGH-MOX	Phase I	Onchocerciasis	Moxidectin tablet (2mg)/ Allopathic drug	February 2020	Dr. Nicholas Opoku	School of Public Health Research Centre, University of Health and Allied Health Sciences, Ho.		Application Approved Actively Enrolling 12 months	To characterize the pharmacokinetics and safety of moxidectin in children (aged 4 to 11 years) and adolescents (aged 12 to 17 years) and to enable determination of an optimal dose for treatment of children 4 to 11 years
28	INOVIO	16	Lassa Fever	1.INO-4500 2.CELLECTRA™ 2000 3.SSC-0001/ Vaccine	30th September 2019	Prof. Kwadwo Ansah Koram	Noguchi Memorial Institute for Medical Research University of Ghana, Legon	Inovio Pharmaceuticals , Inc	Application Approved Actively Enrolling 20 Months	The LASV DNA vaccine expressing the glycoprotein precursor (LASV GPC, Josiah strain matched) paired with intradermal EP is a promising vaccine platform that has been shown to elicit protective immunity and completely protect guinea pigs and non-human primates (NHP) against viremia, illness (acute and chronic), and death after Lassa virus exposure [26, 27] and protect NHPs from hearing loss (unpublished data]. This LASV DNA vaccine, INO-4500, targets GPC because it represents the most conserved region in this genetically diverse virus. In the case of Lassa virus infection, the generation of a robust T cell response appears to be the key to protection from infection. As such, the DNA-EP platform is highly amenable to this disease target. The purpose of this study is to evaluate the tolerability and safety of INO-4500 administered by ID injection followed by EP in healthy adult volunteers
29	STAND	Phase III	Sickle Cell Disease	1.CRIZANLIZUM AB 2.PLACEBO/ Monoclonal antibody	30th September, 2019	1.Dr. Yvonne Dei Adomakoh Dr. Vivian Paintsil	1.Ghana Institute of Clinical Genetics, Korle-Bu Sickle Cell Office Directorate of Child Health,	Novartis Pharma AG	Application Approved. Enrolment closed, participants are receaving treatment 8 years 5 months	Sickle cell disease (SCD) is a genetic blood disorder, caused by a single missense mutation in the β -globin gene, progresses into a systemic disease. Vaso-occlusion is the hallmark of SCD and can lead to serious acute and chronic complications. Extensive preclinical data has established P-selectin as a key mediator of VOC in SCD and suggest that its blockade or genetic absence of P-selectin decreases or eliminates its interactions with its ligands, threeby reducing vaso-occlusion. Crizanilizumab is a monoclonal antibody that binds to P-selectin perventing it interactions with its ligands. The purpose of this study is to compare the efficacy and safety of 2 doses of crizanilizumab (5.0 mg/kg and 7.5 mg/kg) versus placebo in adolescent and adult SCD patients (12 years and older) with history of VOC leading to healthcare visit.
30	AVAREF TV ROTA	Phase III	Gastroenteritis	1.Trivalent Rotavirus P2-VP8 Subunit Vaccine 2.Rotarix®/ Vaccine	9th April, 2019	1.Prof. George E. Armah 2.Dr. Alberta Amu	Dodowa Health Research Centre	РАТН	Approved study commenced 48 Months	Diarrhea is the second-leading cause of death worldwide among children under the age of five, killing an estimated three quarters of a million children annually and hospitalizing millions more in developing countries. The most common cause of infantile diarrhoea is rotavirus and almost all children are infected by their third birthday regardless of geographical area or economic status. Infection is primarily via fecal oral route and improved sanitation alone will not control infection. Oral rotavirus vaccines have traditionally shown lower efficacy in Low and Middle Income Countries (LMICs) as compared to developed countries. Several theories proposed for this observation includes interference by other intestinal viruses or bacteria, neutralization of vaccine by maternally virus by maternally derived antibodies in breastmilk, etc. Some of these challenges may be obviated by a parenteral administered rotavirus vaccine. This study is therefore to demonstrate the efficacy and safety of the parenteral trivalent rotavirus vaccine in healthy infants (≥6 and <8 weeks old) to prevent severe rotavirus gastroenteritis compared with the orally approved Rotarix®

				Investigational						
	TITLE OF		DISEASE	Products (IPs)/IP		PRINCIPAL		SPONSORS &	STATUS & DURATION OF	
<u>N/O</u>	STUDY	PHASE Phase III	INDICATION	1.Nitazoxanide 2.Ciclesonide 3.Paracetamol 4.Ivermectin 5.Artesunate Amodiaquine (ASAQ)/ Allopathic drug	APPLICATION 15th July, 2020	INVESTIGATOR	STUDY CENTRE(S) Komfo Anokye Teaching Hospital	•Bernhard Nocht Institute for Tropical Medicine	STUDY Approved,study commenced 24 Months	PURPOSE/AIM OF STUDY The purpose of this study is to compare the efficacy of alternative treatment strategies versus control on the risk of progression to severe respiratory disease. As there is no validated animal model for COVID-19, the efficacy of any potential treatment remains speculative beyond what is known about their pharmacokinetic and in-vitro data. Several repurposed drugs are currently being tested in severe cases or as prophylaxis, and the results may become available by the time the present study is initiated. At the same time, a number of other drug candidates are being evaluated for in-vitro efficacy or in small proof-of concept studies.13 In view of the rapidly evolving landscape in Africa, it was decided to select an adaptive design for the study in order to allow for the flexibility of adding or dropping arms or adjusting the randomisation ratio based on the data as it be acceptable in some countries, it was decided to adopt a master platform- based approach to be allow for integration of data from all sites in the interim analyses, irrespective of their ability to have randomised patients in all treatment arms
32	LETICIA	Phase II	Aneamia	1.LETICIA protocol diet (provided by study) 2. 3-Fer syrup 3. Usual or Typical diet/ Food supplement	30th August, 2019	Dr. Lawrence Osei-Tutu	Agogo Presbyterian Hospital	Dr. Lawrence Osei-Tutu	Approved, yet to start 12 Months	Iron deficiency is the most common nutritional deficiency worldwide and an important public health problem in Low and Middle Income Countries (LMICs). Causes of anemia in LMICs like Ghana are usually multifactorial including malaria, hemolytic anemias, and chronic blood loss from chronic parasitic infections including schistosomiasis and hookworm. Factors accounting for inadequate supplementation, and food taboos. Anemia may result when iron deficiency is severe, after the body's iron stores are depleted and supply to the bone marrow is limited. This proof of concept study is to determine whether hospitalized children 6-59 months old who presented with moderate-to-severe anemia and given a combination of iron-rich food and standard iron replacement therapy (the intervention group) will demonstrate a greater final hemoglobin (Hb) concentration after two weeks compared to participants of similar characteristics in the control group who will receive oral iron supplementation in addition to their usual diet.
		Phase III				1. Dr Seyram Kaali	1. Kintampo Health Research Centre (KHRC) 2. Navrongo Health Research Centre (NHRC) 3. Dodowa Health Research Centre	Atea Pharmaceuticals		The primary objective is: • To evaluate the efficacy of BEM compared with placebo in reducing all cause hospitalization or all-cause death in COVID-19 outpatients receiving only supportive care. secondary objectives are: • To evaluate the efficacy of BEM compared with placebo • To evaluate the antiviral activity of BEM compared with placebo on viral load rebound
	ATEA COVID 19	Phase IV	Covid-19 Postpartum Hemorhage	Bemnifosbuvir Intrauterine Misoprostol and Sublingual Misoprostol/ Allopathic medicine	7th June 2023 27th May 2023	2. Dr. Nana Akosua Ansah Dr. Chidinma Peace Ohachenu	Department of Obstetrics and Gynaecology, Korle- Bu Teaching Hospital, Accra-Ghana.	, Inc. Dr. Chidinma Peace Ohachenu	Pending approval, 13 months Pending approval, 4 months	To evaluate the safety of BEM compared with placebo To evaluate the effectiveness of intrauterine misoprostol compared to sublingual misoprostol in the prevention of postpartum haemorrhage among women undergoing elective caesarean section in Korle-Bu Teaching hospital
35	INTS GMMA STUDY	Phase II	Typhoid	GVGH INTS- GMMA Vaccine/ Vaccine	17th May 2023	Professor Ellis Owusu- Dabo	KNUST-IVI Collaborative Centre		Pending approval, 3 years 4 months	1. To identify the preferred dose of each component of the iNTS-GMMA vaccine (Dose A [low], Dose B [medium], or Dose C [high]) for infant participants 6 weeks of age 2. To evaluate the safety and reactogenicity of the iNTS-GMMA vaccine in all participants
36	PMC TRIAL	Phase III	Malaria	RTS,S/AS01E Malaria Vaccine, Sulphadoxine- Pyrimethamine, Amodiaquine/ Allopathic and Vaccine	8th May 2023	Dr. Kwaku Poku Asante	Kintampo Health Research Centre (KHRC)	PATH	Pending approval, 3 years 8 months	The primary objective is to determine the efficacy of the combination of RTS,S/AS01E and PMC with sulphadoxine/pyrimethamine alone (PMC SP) or RTS,S/AS01E and PMC with SP and amodiaquine (PMC-SPAQ) against clinical malaria among children up to 24 months of age compared with RTS,S/AS01E vaccine administered alone

	POST MASTECTOMY PAIN RELIEF		Anaesthesia	Erector Spinae block using bupivacaine/ Local anasthetics	2nd December 2021	Dr. Nana Addo Boateng	Komfo Anokye Teaching Hospital (KATH)	Self-Funding	Application Pending Approval	General objective of the study is to determine the postoperative analgesic effect of Erector Spinae Plane (ESP) Block after mastectomy. Specific objectives: 1. To compare the total morphine consumption within 24 postoperative hours between patients receiving ESP block with bupivacaine and ESP block with saline for mastectomy at the Komfo Anokye Teaching Hospital, Kumasi, Ghana. 2. To compare the numeric rating score at 2,4,6,12 and 24 hours between patients receiving ESP block with bupivacaine and ESP block with saline for mastectomy at the Komfo Anokye Teaching Hospital, Kumasi, Ghana. 3. To compare the time to the first request of rescue analgesia between patients receiving ESP block with bupivacaine and ESP block with saline for mastectomy at the Komfo Anokye Teaching Hospital, Kumasi, Ghana. 4. To compare patients satisfaction within the 24-hour postoperative analgesia between patients raceiving ESP block with saline for mastectomy at the Komfo Anokye Teaching Hospital, Kumasi, Ghana.
48	BEMPU	Phase II	Hyppthermia in Infants	BempuBracelet/M edical device	2nd November, 2020	Mr. Prince Owusu	Achimota General Hospital -Greater Accra Regional Hospital Eastern Regional Hospital +Korle-Bu Teaching Hospital -Central Regional Hospital Princess Marie Luis Children Hospital	Center for learning and childhood development	Application Pending Approval	To determine the accuracy of the bracelet in identifying hypothermia and evaluate its effect on Kangaroo Mother Care (KMC) practices and neonatal health outcomes in Ghana. To assess the acceptability of the bracelet in Health providers and caregivers of Low Birth Weight (LBW) infants by conducting qualitative in-depth interviews. Determine the accuracy of the BEMPU bracelet in classifying hypothermia in the clinical setting. Evaluate the impact of the bracelet
49	MAL 094	Phase IIb	Malaria	1.RTS,S/AS01E 2.Rabies vaccine (Rabipur™)/ Vaccine	21st November 2016	Prof. Tsiri Agbenyega	Malaria Research Center, Agogo	GlaxoSmithKline Biologicals SA	Study ended Final report yet to be submitted 72 months	As part of GSK and PATH's commitment to develop a malaria vaccine for reduction of malaria disease burden in children and contribution to the malaria elimination goal, characterization of an optimal dosing regimen and boosting schedules are critical. Results of previous efficacy study MAL 055, including the long term follow-up data and efficacy of a fourth dose administered 18 months after the third dose, and the preliminary results of MAL 071 study (recent controlled human malaria infection) were reviewed by the European Medicines Agency (EMA). There was evidence that demonstrated superior protection against malaria infection were reviewed by the European Medicines. Agency (EMA). There was evidence that demonstrated superior protection against malaria infection associated with the use of a fractional third dose in a 0, 1, 7-month schedule with a higher vaccine efficacy against malaria infection. This study intends to establish Proof of Concept for a fractional dose schedule under conditions of natural exposure. The study will be conducted in children 5-17 months old at first vaccination living in areas of mid to high malaria transmission, no in line with the age group recommended by the Vorld Health Organization. Results from study will be critical in informing future possibilities for the development of vaccine-based strategies which, in combination with other interventions, may contribute to the malaria elimination agenda.
50		Phase III	Covid-19	1.Measles Rubella Vaccine 2.Matching Placebo 3.AstraZeneca	7th September 2020	Prof. Kwadwo Koram	••Ga East Municipal Hospital •Korle-Bu Teaching Hospital •UGMC •Effia-Nkwanta Hospital •Pentecost Treatment Center	Each country serves as its own sponsor bull will receive funding from the Covid 19 Therapeutics Accelerator and Gates Foundation through Washington		The purpose of this study is to determine that MR vaccine increases the likelihood of making the specific AstraZeneca COVID-19 vaccine more effective in people with prior exposure to the MR vaccine. This study has two different groups: one group will receive the active MR vaccine and one will receive a placebo. Thirty and sixty days later, participants in each group will receive the AstraZeneca COVID-19 vaccine.

51		Phase II	Onchocerciasis	1.Diethylcarbam azine Citrate I. P 100mg 2.Ivermectin (Stromectol® 3mg) 3.Albendazole (Zentel [™] 400mg) / Allopathic drugs	22nd February 2019	Dr. Nicholas Opoku	University of Health and Allied Sciences	Washington University School of Medicine	Study ended Final report submitted 24 Months	Programs for control of onchocerciasis through community directed treatment with ivermectin (IVM) as a form of Mass Drug Administration (MDA) have been in place for almost 30 years. IVM is effective for clearing Mf and it temporarily sterilizes adult female worms, but it is not a microfilaricide and does not kill adult worms. For that reason, MDA with IVM must be repeated for the reproductive life of the adult worms, which is 10-15 years. Thus, there is a widely recognized need for new, safe, short-course treatment drug(s) that can kill or permanently sterilize adult worms. This study aims to provide preliminary data on the safety of ivermectin + diethhylcarbamazine + albendazol (IDA) treatment in persons with onchocerciasis when administered after pre-treatment with IVM to clear or greatly reduce microfilariae from the skin and eyes. Widespread use of IDA following IVM pretreatment (I/IDA) has the potential to greatly accelerate elimination of LF in African countries that are coendemic for LF and onchocerciasis
52		Phase II	Stroke	1.POLYCAP 2.USUAL CARE / Allopathic drug	9th February, 2018	Dr. Fred Stephen Sarfo	Komfo Anokye Teaching Hospital	Kwame Nkrumah University of Science and Technology	Study ended Final report submitted 19 months	Africa (SSA), which when compared to stroke profiles in high-income countries (HIC) is characterized by a younger age of onset, higher case fatality rates, and more severe disability among survivors. Stroke survivors in SSA are especially at high risk for recurrent vascular events or death due to several factors including unccordinated health systems, undiagnosed and under-controlled vascular risk factors, and lack of care affordability. Fixed-dose combination pills, known as "polypills", containing Aspirin, a statin and blood pressure (BP) lowering medication(s) may improve medication adherence and consequently reduce vascular risk as a cost-effective intervention among high risk patients including stroke survivors. This trial is to assess whether a polypill containing fixed doses of 3 antihypertensives, a statin and antiplatelet therapy taken once daily orally would result in carotid intimal thickness regression, improved adherence, and tolerability compared with 'usual care' group on separate individual secondary preventive medications among Ghanaian first time stroke survivors (male or female above
53	LEDoxy	Phase II	Lymphatic Filariasis	1.Doxycycline (Remycin®100mg 2.Placebo 3.Standard MDA Treatment/ Allopathic drug	12th July, 2017	Prof. Alexander Yaw Debrah	1.Kumasi Centre for Collaborative Research (KCCR), Kwame Nkrumah University of Science and Technology (KNUST) 2.War Memorial Hospital, Navrongo	Kumasi Center For Collaborative Research (KCCR)	Study ended Final report submitted 40 months	The previously demonstrated effect of doxycycline in reversing or stopping the progression of lymphedema of patients with stage 1-3, irrespective of their filarial infections being active or not, provides an opportunity to include the drug as a new tool inlymphatic filariasis (LF) morbidity management programs. However, before recommendations can be made regarding the frequency of its usage or alternate dosing patterns more trials need to be conducted. This multi-national trial is to show efficacy of a lower dosage of doxycycline and to confirm finding in patients with stages 1-3 lymphedema irrespective of active LF infection as well as in people with higher grades of lymphedema. The purpose of the study is to establish that Doxycycline can improve filarial lymphedema in healthy adolescents or adults (14 – 65 years)
54		Phase III	Surgery	1. ChloraPrep™ stick 2. Videne® Antiseptic Solution 3. Triclosan Coated PDS and/or Vicryl sutures 4. Non-triclosan coated PDS and/or Vicryl sutures/ Medical device	10th April, 2019	Prof. Stephen Tabiri	Tamale Teaching Hospital	The University of Birmingham	Study ended Final report submitted 24 Months	Improving surgical outcomes is a global health priority. Recent World Health Organisation (WHO) guidelines made 29 recommendations for intraoperative and postoperative measures to prevent SSI, including global perspectives relevant to LMICs., none of the evidence for the recommendations used was derived from resource limited settings, leading to uncertainty about implementation of measures in these settings. A randomised trial that has the potential to evaluate multiple interventions has particular value in this setting, and can establish a high quality evidence base that will inform guidance, and influence revisions to the WHO Surgical Safety Checklist This study assesses whether either (1) 2% alcoholic chlorhexidine versus 10% povidone-iodine for skin preparation, or (2) triclosan-coated suture versus non- coated suture for fascial closure, can reduce surgical site infection at 30-days post-surgery for each of (1) clean-contaminated and (2) contaminated/dirty surgery

										The lack of access to reliable tests for proteinuria measurement in all antenatal
										care settings, particularly at the periphery, remains a critical gap in the accurate identification of women at high risk for Pre-Eclampsia. In Low Resource Settings,
										a protein-only measurement via a urine dipstick is the most widely used
										proteinuria test due in part to its low complexity and low cost. However, the
										clinical utility of the protein-only dipstick is limited. Test results can be unreliable.
				1.Test-It™ Protein						as the test cannot adjust for daily fluctuation of body hydration. This leads to
				Creatinine						protein measurements that are either too low or too high due to the level of urine
				Dipstick						dilution. More accurate tests, such as the 24-hour urine test, are available only for
				2.Urinalysis						confirmatory testing in tertiary-level clinics due to their high cost and technical

	STUDY MAL 073	PHASE Phase IIIb	INDICATION	LRTS,S/AS01E 2.MR-VAC™ 3.STAMARL4. VITAMIN A	APPLICATION	INVESTIGATOR	1.Malaria Research Center, Agogo 2.Kintampo Health	GlaxoSmithKline	STUDY Study Ended Final Report	PURPOSE/AIM OF STUDY In sub-Saharan Africa, most of the Expanded Program on Immunization (EPI) vaccines are given at 9 months of age. Between the first EPI vaccines and the measles, rubella and YF vaccines, children receive Vitamin A supplementation at 6 months of age. To limit the number of clinic visits for young children and to optimize vaccine implementation a schedule (0, 15, 3-month) is proposed. There are however no data of the anti-circumsporozoite protein of Plasmodium falciparum (anti-CS) immune response induced by RTS,S/AS01E when given in co-administration with measles, rubella and YF, in a 0, 1.5, 3-month schedule starting at an older age (5-17 months). This study intends to demonstrate that anti- CS immune response of the candidate malaria vaccine RTS,S/AS01E is not inferior when RTS,S/AS01E is administered at 6, 7.5 and 9 months of age with the third dose given alone or in co-administration with measles, rubella and YF in a 0, 1.5, 3-month schedule starting at 6 months of age. This study will therefore provide safety information when RTS,S/AS01E is and on this of age alone or in co-administration with YF vaccine and a combined measles and rubella vaccine

Study terminated by sponsor 13 months	 To evaluate the safety and reactogenicity of the recombinant two-component COVID-19 vaccine (CHO cell) (ReCOV for short) in adults aged 18 years and older. To evaluate SARS-CoV-2 neutralizing antibody of ReCOV on Day 14 after 2 doses vaccination in adults aged 18 years and older. To evaluate the efficacy of ReCOV in preventing RT-PCR confirmed symptomatic COVID-19 in adults aged 18 years and older. To evaluate the safety and reactogenicity of ReCOV in adults aged 18 years and older.
136	MoRiOn	Phas II	Onchocerciasis	1.Rifanpentine (Priftin®) 2.Moxifloxacin (Avelox®) 3.Doxycycline/V accine	28th April, 2017	Prof. Alexander Yaw Debrah	1.Enchi Government Hospital 2.Communities of Aowin/Suaman District W/R		Study terminated by sponsor Yet to submit Final report 15 months	Onchocerciasis is caused by the parasite Onchocerca volvulus. More than 37 million people are estimated to be infected with O. Volvulus worldwide. The current therapeutic strategy relies on annual mass drug administration (MDA) based on the drug donation program for Ivermectin. Ivermectin is mainly microfilaricidal and after a few months female worms resume MF production levels high enough for transmission. Therefore, safe microfilaricidal drugs are needed to reach the goal of elimination. The study aims to show efficacy (Wolbachia depletion) of combination Rifapentine plus MoxifiCacxin using immunohistology compared to no treatment and treatment with Doxycycline.

It also seeks to evaluate among these patients the effect of a one-time mouth rinse on the detectable viral load of SARS-CoV-2 and to determine how long it takes for SARS-CoV-2 viral load to remain low after using the mouth rinse.
138	IMR SCD	Phase IIb	Sickle Cell Disease	1.IMR-687 2.IMR-687 Placebo/Allopathi c	13th August 2020	Dr. Seyram Kaali	•Korle-Bu Teaching Hospital •Kintampo Health Research Centre	IMARA Inc.	Early termination by Sponsor 1 Year 7 Months	study of subjects aged 18 to 65 years with SCD (HbSS, HbSB0 thalassemia, or HbSB+ thalassemia) to evaluate the safety and efficacy of the PDE9 inhibitor, IMR-687, administered qd for 52 weeks. This study will provide data on IMR-687 doses of \geq 0.1 to \leq 4.5 mg/kg and \geq 4.5 to \leq 6.7 mg/kg. In a relevant model of anemia (Hbbth1/th1 mice), oral administration of IMR-687 for 30 days at 30 mg/kg/day (human equivalent dose of 2.4 mg/kg/day) or 60 mg/kg/day (human equivalent dose of 4.9 mg/kg/day) increased RBCs and Hb, and reduced reticulocytes. The degree of these changes was dose dependent, with statistically significant improvement at the higher dose of 60 mg/kg. In addition, IMR-687 at
139	HESTIA4	Phase I	Sickle Cell Disease	Ticagrelor/ Allopathic	16th May, 2018	1. Dr. Patrick Ansah 2. Dr. Catherine Segbefia 3. Dr. Kokou Hefoume Amegan-Aho	1. Navrongo Health Research Centre 2. Korle-Bu Teaching Hospital 3. Volta Regional Hospital	AstraZeneca AB	Study termination 31 Months	Complications of sickle cell disease (SCD) occur very early in life. Painful crises first appear in the fingers and toes (dactylitis) in very young children prior to their first birthday. In addition to painful crises occurring in the very young, SCD can affect organ function early in life. Loss of splenic function begins as early as 5 months of age with associated increase in infection risk. Stroke risk begins at age 2. Given the early onset of symptoms and complications of this disorder, therapies for SCD should be targeted at children, including the very young. There is a need to first establish the pharmacokinetics (PK) of ticagrelor in this age group to allow for modelling or extrapolation in this population. This goal of the study is to evaluate PK data in the 0-2 year old population in order to way for further studies and ultimately use of ticagrelor in this youngest population.

23 BURULIRIFDACC A randomized controlled trial to evaluate the effect of High Dose of Rifampicin and Dialkylcarbamoyl chloride (DACC)-coated dressings on outcomes in Mycobacterium ulcerans disease					5			•					

N/O	TITLE OF STUDY	Investigational DISEASE Products (IPS)/IP ,DATE OF RECEIPT OF PRINCIPAL SPONSORS & STATUS & DURATION OF PHASE INDICATION CLASS APPLICATION INVESTIGATOR STUDY CENTRE(S) APPLICANT STUDY PURPOSE/AIM OF STUDY											
24	CDA	A Multicenter, Randomized, Double Blind Study to Compare the Efficacy and Safety of CDA Versus Artemether-Lumefantrine in the Treatment of Acute Uncomplicated P. Falciparum Malaria in Children and Adults in Africa.											
25	CDA2	A Multicenter, Randomized, Double Blind Study to Compare the Efficacy and Safety of CDA Versus Chlorproguanil-Dapsone in the Treatment of Acute Uncomplicated P. Falciparum Malaria in Children and Adults in Africa.											
26	CEREBETA	Efficacy of Beta-Glucans from Barley and Maintenance of Normal Blood LDL-Cholesterol Concentrations: A Randomized Control Study in Ghana.											
	CPAP	Dinical Trial Evaluating the Difference in Mortality Rates in Children in Ghana Receiving Continuous Positive Airway Pressure (CPAP) Versus Those Who Do Not.											
	CRASH-2	A Large Randomized Placebo Controlled Trial, among trauma patients with or at risk of significant Haemorrhage, of the Effects of Anti- Fibrinolytic treatment on Death and Transfusion requirement											
29	CALLASCOPE	Clinical Studies and in-Depth Interviews for Portable, low-cost and Speculum-Free Cervical Cancer Screening in Ghana Phase 3 Randomized, Active-Comparator Controlled, Open-Label Trial to Evaluate the Immunogenicity and Safety of Alternate Two-Dose Regimens of a Bivalent Human Papillomavirus (HPV) Vaccine (Cecolin®) Compared to a Licensed Quadrivalent HPV Vaccine											
30	CECOLIN	(Gardasil®) in Healthy 9-14 Year-Old Girls in Low and Low-Middle Income Countries											
31	CEPHEIDXPERT HIV-1	An Investigation to Evaluate the Performance of the Cepheid XpertR HIV-1 VL XC Test											
32	CIELO	A Phase III, Randomized, Double-blind, Placebo-controlled, Multicenter Basket Study to Evaluate the Efficacy, Safety, Pharmacokinetics, and Pharmacodynamics of Satralizumab in Patients with Anti-N-Methyl-D-Aspartic Acid Receptor (NMDAR) or Anti-Leucine-Rich Glioma- Inactivated 1 (LGI1) Encephalitis											
33	COPE TRIAL	Effectiveness and Acceptability of two models of an Insertable Vaginal Cup for Non-surgical management of obstetric fistula in Ghana: a hybrid type 1 randomized crossover trial											
34	COVID ABDOV	A randomized, double-blind, positive-controlled Phase III clinical trial to evaluate the efficacy and safety of SCTV01E (A COVID-19 Alpha/Beta/Delta/Omicron Variants S Trimer Vaccine) in population previously unvaccinated with COVID-19 vaccine and aged ≥18 years" (COVID ABDOV).											
35	CROWN CORONATION	An international, Bayesian platform adaptive, randomized, placebo-controlled trial assessing the effectiveness of candidate interventions in preventing COVID-19 disease in healthcare workers											
36	CHEETAH	Cluster Randomized Trial of Sterile Glove and Instrument Change at the Time of Wound Closure to Reduce Site Infection: A Trial In Low- And Middle-Income Countries (LMICs)											
37	COVID 19 CHO- CELL	A multicenter, randomized, double-blind, placebo-controlled Phase II/III trial to evaluate the efficacy, safety and immunogenicity of the recombinant two-component COVID-19 vaccine (CHO cell) in adults aged 18 years and older											
38	INTRANASAL SPRAY COVID 19	A Global, Multi-center, Randomized, Double-blind, Placebo-controlled Phase III Clinical Trial to Evaluate the Protective Efficacy and Safety of Influenza Virus Vector COVID-19 Vaccine for Intranasal Spray (DeINS1-2019-nCoV-RBD-OPT1) in Adults Aged 18 Years and Older											
39	MOUTHWASH	Viral Shedding Dynamics and the Effect of Antimicrobial Mouthwashes on the Detection of SARS-CoV-2 in Ghana.											
40	DIABETIC FOOT CARE	Family-oriented Diabetic Foot Self-care Programme in Ghana; A Feasibility Randomised Controlled Trial with nested qualitative interviews at the Komfo Anokye Teaching Hospital.											
41	DOLF_IDA	Safety and Efficacy of Combination Therapy with Ivermectin, Diethylcarbamazine and Albendazole (IDA) for Individuals with Onchocerciasis											
	EBA EBOLA Z	Double-Blinded, Placebo-Controlled Dosage-Escalation Study and Immunogenicity of EBA-175 RII-NG Malaria Vaccine Administered Intramuscularly in Semi Immune Adults A Phase 2, Randomized, Observer-Blind, Placebo-Controlled, Multi-Country Study to Assess the Safety and Immunogenicity of a Single Intramuscular Dose of GSK Biologicals' Investigational Recombinant Chimpanzee Adenovirus Type 3 – Vectored Ebola Zaire Vaccine. (IChAd3-EBO-Z) (GSK3390107A), in Adults 18 vears of ace and older in Africa											
	EBOLA Z (PAEDIATRIC)	A Phase 2, Randomized, Observer-Blind, Placebo-Controlled, Multi-Country Study to Assess the Safety and Immunogenicity of a Single Intramuscular Dose of GSK Biologicals' Investigational Recombinant Chimpanzee Adenovirus Type 3 – Vectored Ebola Zaire Vaccine. (ChAd3-EBO-Z) (GSK3390107A), in children 1 to 17years of age in Africa											
45	EBSI-LSV	A Phase 1 Randomized, Blinded, Placebo Controlled, Dose-Escalation and Dosing Regimen Selection Study to Evaluate the Safety and Immunogenicity of rVSV-Vectored Lassa Virus Vaccine in Healthy Adults at Multiple Sites in West Africa											
46	ELDON CARD	Using Eldon Card for Testing of Maternal and Newborn Blood Group in Comparison with the Standard Laboratory Method of Blood Group Testing in Accra, Ghana											
47	EMODEPSIDE	A phase II, Randomised, double-blind, parallel – group trial to investigate Emodepside (BAY 44-4400) in subjects with onchocerca volvulus infection.											
48	ESM UBT	A Multi-Centre Prospective Trial on the Impact of the Introduction of Condom-Based Uterine Balloon Tamponade for Uncontrolled Postpartum Hemorrhage											
49	FALCON	Pragmatic Multicentre Factorial Randomized Controlled Trial Testing Measures to Reduce Surgical Site Infection in Low and Middle Income Countries											
50	FERROQUINE	Randomized Multicentre Study Evaluating the Safety and Activity of Ferroquine Associated with Artesunate versus a Positive Calibrator (Amodiaquine Associated with Artesunate) In African Adult Patients with Uncomplicated Malaria											
51	BUILLON CUBES	Effect of household use of multiple micronutrient-fortified bouillon on micronutrient status among women and children in two districts in the Northern region of Ghana											
	GARDASIL	Evaluation of Safety And Immunogenicity Of Gardasiltm In Healthy Females Between 9 And 26 Years Of Age In Subsaharan Africa

61	HYDRANON	Hydranon® solution (GR-08) in healthy a	adult volunteers										
62	HESTIA4	A Multi-centre, Phase I, Open-label, Sin	gle-dose Study to In	vestigate Pharmacokinetics	(PK) of Ticagrelor in Infants	and Toddlers, Aged 0 to	less than 24 Mo	nths, with Sickle Cell Disease					
63	HESTIA3	A Randomised, Double-Blind, Parallel-G	roup, Multicentre, P	Phase III Study to Evaluate th	ne Effect of Ticagrelor versu	s Placebo in Reducing t	e Rate of Vaso-C	Occlusive Crises in Paediatric Pat	ients with Sickle Cell Disease				
64	IMR-SCD-301	A Phase 2b Study to Evaluate the Safet	y and Efficacy of IM	R-687 in Subjects with Sickl	e Cell Disease								
65	INNOVATE	Phase 2/3 Randomized, Blinded, Placeb Exposure	oo-Controlled Trial to	o Evaluate the Safety, Immu	nogenicity, and Efficacy of II	NO-4800, a Prophylactic	Vaccine against	COVID-19 Disease, Administered	Intradermally Followed by Electroporation in Adults at High Risk of SARS-CoV-2				
66	INO-9112 COVID 19	Phase 1 Open Label, Randomized Stud Against SARS-CoV-2 with mRNA Vaccin		afety, Tolerability, and Immu	nogenicity of an Intradermal	Booster Dose of INO-48	00 alone or in cor	nbination with INO-9112 followed	by Electroporation in Adults who Completed a Primary Immunization Series				
67	INVACT	In Vivo Efficacy of Artemisinin Combinat	tion Therapy to Expl	lore Laboratory and Parasito	logical Markers of Artemisin	in Resistance in Uncom	licated Plasmodi	um falciparum Malaria in Ghana.					
68	IPT & SP	Operational Research on Intermittent Pr	eventive Treatment	of Malaria in Infants (IPTi) v	vith Sulfadoxine/Pyrimetham	ine (S/P)							
69	INSUGEN	Post Market Surveillance Study of Insug	en 30/70										
70	INTS GMMA	A Phase IIa observer-blind, randomized response of the GVGH iNTS vaccine ag				e the safety, reactogenic	ty, and immune						
	INOVIO – LASSA	¥	21										
71	FEVER	Study to evaluate the safety, tolerability	and immunogenicity	y ot INO-4500 in Healthy voli	unteers								
72	IRON FORTIFICATION	Seasonal Impact Of Iron Fortification Or	Malaria Incidence	In Ghanaian Children									
73	IUMO			SOPROSTOL VERSUS SUF	RUNGUAL MISOPROSTO				CAESAREAN SECTION AT KORLE BU TEACHING HOSPITAL.				
13	10.110	TRALE OF THE TRAL							CALCUMENT CECTOR AT NOLE BUT EACHING HOUTTAL.				
74	IVERMECTIN GH	Safety and Efficacy of Ivermectin in the	Prevention and Mar	nagement of COVID- 19 amo	ong Ghanaian Populations								

N/O	TITLE OF STUDY	DISEASE PHASE INDICATION	Investigational Products (IPs)/IF CLASS	P ,DATE OF RECEIPT OF APPLICATION	PRINCIPAL INVESTIGATOR	STUDY CENTRE(S)	SPONSORS & APPLICANT	STATUS & DURATION OF STUDY	PURPOSE/AIM OF STUDY					
75	KAE609	A Phase 2, Multi-Center, Random	nized, Open - Label, Dos	e Escalation Study To Deter	mine Safety Of single (QI	D) and Multiple (3QD) Doses	Of KAE609, Give	en To Adults With Uncomplicated	d Plasmodium Falciparum Malaria					
76	KNC 19(NIBIMA)	Repurposing the aqueous Extract	•		, , , , , , , , , , , , , , , , , , ,			·						
77	LEDoxy	Doxycycline 200mg/d vs. 100mg/	oxycycline 200mg/d vs. 100mg/d for 6 weeks to improve filarial lymphedema - a multinational, double-blind, randomized, placebo-controlled trial.											
78	LETICIA	ombination Food-Based And Supplemental Iron Replacement Therapy For Children With Moderate-To-Severe Anemia In A Rural Ghanaian Setting: A Proof-Of-Concept Study												
79	LIVZON	Global, Multi-Center, Randomized, Double-Blind, Placebo-Controlled, Phase III Clinical Study to Evaluate the Efficacy, Safety, and Immunogenicity of Recombinant SARS-CoV-2 Fusion Protein Vaccine (V01) in Adults Aged 18 Years and older.												
80	MAL 047	Randomized, Controlled, Partially Aged 5 To 17 Months Living In G		ety And Immunogenicity Of C	Glaxosmithkline Biological	s' Candidate Plasmodium Fa	lciparum Vaccine	es RTS,S/AS02D And RTS,S/AS0	01E, When Administered IM According To A Three Dose Schedules In Children					
81	MAL 050	Randomized, Open, Controlled S DTPWHEPB/HIB.OPV, Measles a					alaria vaccine RT	S, S/AS01E when incorporated i	into an expanded program on immunization (EPI) regimen that includes					
82	MAL 055	Double Blind (Observer Blind), Ra Africa	andomised, Controlled N	fulticentre Study To Evaluate	e In Infants And Children,	The Efficacy Of RTS,S/AS10	E Candidate Vac	ccine Against Malaria Disease Ca	aused By P. Falciparium Infection Across Diverse Malaria Transmission Settings In					
83	MAL 063	Randomized, Open, Controlled S	tudy To Evaluate The Im	nmune Response To The He	patitis B Antigen Of The F	RTS,S /AS01E Candidate Va	cine, When Adm	ninistrated As Primary Vaccination	n Integrated Into An EPI Regimen To Infants Living In Sub-Saharan Africa					
84	MAL 073	rubella and yellow fever vaccines	followed by an RTS,S/A	S01E booster vaccination 18	8 months post Dose 3, to	children living in sub-Sahara	n Africa		ation at 6, 7.5 and 9 months of age with or without co-administration of measles,					
85	MAL 094	17 Months of age Living in Sub-S	aharan Africa.			-			edules with or without Fractional Doses, early Dose 4 and yearly Doses, in Children					
86	MDGH-MOX- 1006	An open-label study of the pharm	acokinetics and safety o	f a single dose of moxidectir	n per oral in subjects aged	1 4 to 17 years with (or at risk	of) onchocercias	sis to identify an optimal dose for	treatment of children 4 to 11 years					
87	MEBENDAZOLE MEFLOQCHLOA	Efficacy and Safety Of A Single D	Dose Reigimen And A M	lulti Dose Regimen Of Meber	ndazole Against Hookwori	m Infections In Children And	Adolescents In G	hana : A Randomized Control Tr	rail.					
88	ZITH	A Phase III, Randomized, Opened	d-Label, Comparative Tr	ial Of Azithromycin Plus Chlo	proquine Versus Mefloqui	ne For The Treatment Of Un	complicated Plas	modium Falciparum Malaria In Af	frica.					
89	AL-A CONJUGATE	A Phase II, Double Blind, Randon	nized, Controlled, Dose	Ranging Study to Evaluate th	ne Safety, Immunogenicity	y Dose Response and Sched	ule Response of	a Meningococcal A Conjugate Va	accine administered concomitantly with local EPI vaccines in Healthy Infants.					
90	MMS	The Use Of A Multiple Micronutrie	ent Supplement In Wom	en Of Reproductive Age										
91	MoRiOn	The Efficacy of Rifapentine 900m	ıg/d plus Moxifloxacin 40	00mg/d given for 14 or 7 days	s against Onchocerciasis	 – a Randomized, Controlled, 	Parallel-Group, C	Open Label, Phase II Pilot Trial						
92	MOXIDECTIN	Randomized, single-ascending do	ose, Ivermectin-controlle	d, double-blind, safety, tolera	ability, pharmacokinetic ar	nd efficacy study of orally adr	ninistered Moxide	ectin in subjects with Onchocerca	a volvulus Infection					
93	MOXIDECTIN- IVERMECTIN	A Phase III Randomized, Single-A	Ascending-Dose, Iverme	ctin-Controlled, Double-Blind	l, Safety, Tolerability, Pha	rmacokinetic, and Efficacy S	udy of Orally Adr	ninistered Moxidectin in Subjects	s with Onchocerca volvulus Infection':					
	MULTIMAL	Multi-Drug Combination-Therapie	s to prevent the Develop	oment of Drug Resistance: P	hase II Controlled Clinical	I Trial Assessing Candidate F	egimens of Multi	iple-Antimalarial Combinations fo	or the Treatment of Uncomplicated Malarial in Africa					
	MYCOPIROX_LA GRAY	Randomized, open labelled trial to	o evaluate the efficacy, s	safety and tolerability of myco	opirox vaginal cream in th	e treatment of mixed infectio	n vaginitis							
96	NEOVITA	Feasibility Studies												
97	NOGUCHI FILARIASIS	Determination of the Prevalence	of LF Infection in District	s Not Included in LF Control	Activities and of the Basis	s for Integrated Implementati	on of LF - Oncho	cerciasis Elimination Strategies in	in Potentially Co-endemic Areas					
98	NOGUCHI SCD	A Phase 1B Dose – Finding Phar	macokinetics and Pharm	nacodynamic Study Oof NVX	– 508 In Sickle Cell Dise	ase (SCD) Patients								
99	NON-INVASIVE HAEM DEVICE	A Comparison of Hemoglobin Val	lues as Measured By Th	e Pronto And Pronto 7 Non-I	Invasive Hemoglobin Devi	ices, The Hemocue Hb 201+	And A Hematolo	ogy Analyzer Among Pregnant W	omen Attending Antenatal Care Clinic In Ghana					
100	NOVASIL	Safety and Efficacy Evaluation of	Novasil: Strategy for the	e Protection of Humans from	Aflatoxin Toxicity									

N/O	TITLE OF STUDY	Investigational DISEASE Products (IPs)/IP ,DATE OF RECEIPT OF PRINCIPAL SPONSORS & STATUS & DURATION OF PHASE INDICATION CLASS APPLICATION INVESTIGATOR STUDY CENTRE(S) APPLICANT STUDY PURPOSE/AIM OF STUDY											
101	NOVIC TRIAL	Novel vacuum-induced Haemorrhage control for postpartum Haemorrhage: a multicentre randomised trial											
102		Determining the Effect of Prophylactic Administration Of Oxytocin In Uniject [™] By A Community Health Officer On Post-Partum Haemorrage At Home Births In The Kintampo North And South Districts Of Ghana											
103	PFCSP_MVACS_ MALARIA	Partial Double-Blind, Randomized Study of PFCSP DNA/MVA Prime Boost Vaccine											
104	PIVOT	Prospective Identification of Variables as Outcomes for Treatment (PIVOT): A Phase II clinical trial of hydroxyurea for children and adults with HbSC disease											
	POLYPHENOL- RICH COCOA												
	POWDER TRIAL	Polyphenol-rich Cocoa Powder as Adjuvant Therapy in Patients with Covid-19.											
	MASTECTOMY	ULTRASOUND-GUIDED ERECTOR SPINAE PLANE BLOCK FOR POST-MASTECTOMY PAIN RELIEFve											
		: A multi-part, multi-center PLATform study to assess the efficacy, safety, tolerability and pharmacokinetics of anti-malarial agents administered asmonotherapy and/or combination therapy IN patients with Uncomplicated Plasmodium falciparum Malaria											
108	PMC TRIAL	The impact of a combination of the RTS,S/AS01E malaria vaccine and perennial malaria chemoprevention in Ghanaian children											
	PRAISE	An adaptive, Randomized, Placebo-controlled, Double-Blind, Multi-center Study of Oral FT-4202, a Pyruvate Kinase Activator in Patients with Sickle Cell disease (PRAISE)											
110	PREGACT	Evaluating the Safety And Efficacy Of Artemisinin-Based Combination Treatments For African Pregnant Women With Malaria											
111	PRENABELT	A Maternal Device to Reduce the Risk of Stillbirth and Low-Birth Weight											
112	PROBIOTIC	A double-blind randomized control trial of a synbiotic vs. placebo among pregnant women to evaluate colonization of the gut microbiota of their infants with Lactobacillus plantarum (Probiotics pilot in Ghana)											
	PROBIOTIC(IN MILD												
113	ARTESUNATE	Assessing the Therapeutic Effect of Probiotics on Individuals with Mild Cognitive Impairment											
114	VRS COARTEM	andomized multicentre clinical study to assess the safety and efficacy of fixed dose formulation of oral pyronaridine artesunate tablet versus coartem in children and adult patients with acute uncomplicated plasmodium falciparium malaria											
115	PRCR DIPSTICK	Validation of a Protein Creatinine (PrCr) Dipstick Diagnostic Test for Proteinuria Screening on Antenatal Care Clinics in Ghana											
116	PRCR SPOT	Evaluating the clinical utility and operational fit of the lifeAssay Diagnostics Test-It TM PrCr urinary dipstick test to assess risk of pre- eclampsia in referral hospitals in Ghana: A SPOT nested study, developing and VALidating a Severe Pre-eclampsia adverse Outcome Triage (SPOT) score											
117	RECOVERY	Randomized Evaluation of Covid-19 Therapy (RECOVERY)											
118	RIFAMPIN VS ISONIAZID	A Randomized Clinical Trial of 4 months Rifampin versus 9 months Isoniazid for treating Latent TB Infection											
119	ROBOCOW	RANDOMIZED PLACEBO-CONTROLLED TRIAL TESTING 0.2% CHLORHEXIDINE MOUTHWASH TO REDUCE POSTOPERATIVE RESPIRATORY TRACT INFECTIONS IN ABDOMINAL SURGERIES											
120	ROTARIX	Immunogenicity of The Human Rotavirus Vaccine (Rotarixtm) At Varying Schedules and Ages in Rural Ghana											
	DOTAGLIST D												
121	ROTASHIELD	The Randomized, Double-Blind, Placebo-Controlled Evaluation of The Efficacy, Immunogenicity, and Safety of 2 Single Doses of RRV-TV in Neonates/Infants											
123	ROTATEQ	Efficacy, Safety and Immunogenicity of RotateqTM Among Infants in Africa and Asia.											
124	SALIF	A Phase 3b, Randomized, Open-label Clinical Study to Demonstrate non-inferiority in Virologic Response Rates of HIV-1 RNA Suppression <400 Copies/mL of TDF/FTC/RPV Versus TDF/FTC/EFVin First-line Antiretroviral NNRT/-based Suppressed Patients Switching A Low HIV-1 RNA Into Fixed Dose Combinations											
125	SAR97276A_SA NOFI	A Multicentre, Open Label, Efficacy And Safety Of Parenteral Sar97276a In The Treatment Of Symptomatic Uncomplicated And Severe Malaria In Adults And Children											
126	SAVVY	Randomised Controlled Trials of Savvy In HIV											
	SAVING BRAINS	Saving Brains from Malnutrition: Implementation of Evidence-Based Nutritional Supplementation and Psychosocial Stimulation Program for Pregnant and Lactating Women and their Infants Post Weaning, To Improve Cognition and Behavioral Regulation to Deliver Better											
	KUMASI SAVING BRAINS NAVORONGO	Social and Economic Prospects Later in Life Saving Brains from Malnutrition: Implementation of Evidence-Based Nutritional Supplementation and Psychosocial Stimulation Program for Pregnant and Lactating Women and their Infants Post Weaning, To Improve Cognition and Behavioral Regulation to Deliver Better Social and Economic Prospects Later in Life											
129	SHEA LIDO	Comparison of Shea butter and Lidocaine gel for rectal examination- A Non-Inferiority Trial											

N/O	TITLE OF STUDY	Investigational DISEASE Products (IPS)/IP ,DATE OF RECEIPT OF PRINCIPAL PHASE INDICATION CLASS APPLICATION INVESTIGATOR STUDY CENTRE(S) APPLICANT STUDY PURPOSE/AIM OF STUDY											
	SMAC	A Comparative, Open Label, Dose And Regimen Optimization Follow-Up Study Of Intravenous And Intramuscular Artesunate In African Children With Severe Malaria.											
	SMAART	Stroke Minimization through Additive Anti-atherosclerotic Agents in Routine Treatment											
132	SOYPEPTIDE STUDY	splication of Bioactive Peptide for the Attenuation of Malnutrition in Cancer Patient in a treatment Health Facility in Ghana											
133	SPUTNIK LIGHT	A phase III randomzed double blind, placebo- controlled international multisite clinical trial in parallel assignment to evaluate efficacy, immunogenicity and safety of the sputnik light vector vaccine in adults in the sars-cov-2 infection prophylactic treatment											
134	STAND	phase III randomzed double blind, placebo- controlled international multisite clinical trial in parallel assignment to evaluate efficacy, immunogenicity and safety of the sputnik light vector vaccine in adults in the sars-cov-2 infection prophylactic treatment Phase III, Multi-Centre, Randomized, Double-Blind Study to Assess Efficacy and Safety of Two Doses of Crizanlizumab Versus Placebo With or Without Hydroxyurea/Hydroxycarbamide Therapy in Adolescent and Adult Sickle Cell Disease Patients with Vaso Occlusive ises (STAND)											
135	STAR	POSTOPERATIVE PAIN MANAGEMENT IN EMERGENCY ABDOMINAL SURGERY: BIMODAL VERSUS UNIMODAL ANALGESIA											
136	STEADFAST	A Phase II, multicenter, randomized, open label two arm study comparing the effect of crizanlizumab + standard of care to standard of care alone on renal function in sickle cell disease patients > 16 years with chronic kidney disease due to sickle cell nephropathy											
137	SWIS	Feasibility, Acceptability, and Outcomes of Sterile Water Injection (SWI) in Managing Lower Back Pain among Labouring Women in a Tertiary Hospital in Ghana: A Mixed-method Study											
138	TADO	Double-Blind, Randomized, Efficacy And Safety Comparison Of Prasugrel And Placebo In Pediatric Patients With Sickle Cell Disease											
139	TENOFOVEK BE	A balanced, randomized, two treatment, two-period, two-sequence single dose crossover, open-label, analyst blind and single centre bioequivalence study test product; Tenofevek of Danadams Pharmaceuticals Industry Ltd., Ghana and reference product; Viread (Gilead Sciences, Inc., CA, USA) in healthy, Ghanaian adult, male, human participants under fasting conditions.											
140	TENOFOVIR	A Phase II Study for Tenofovir Disoproxyl Fumarate for Prevention of HIV											
	TYVEGHA VAT00008	A cluster-randomized controlled Phase IV trial assessing the impact of a Vi-Polysaccharide conjugate vaccine in preventing typhoid infection in Asante Akim, Ghana (TyVEGHA)": A parallel-group, Phase III, multi-stage, modified double-blind, multi-armed study to assess the efficacy, safety, and immunogenicity of two SARS-CoV-2 Adjuvanted Recombinant Protein Vaccines (monovalent and bivalent) for prevention against COVID-19 in adults 18 years of age and older											
142	VERO CELL COVID 19 TRIAL	A Randomized, Double-Blinded, Placebo-Controlled, Phase III, Clinical Trial of SARS-CoV-2 Vaccine, Inactivated (Vero Cell) in Adults Aged 18 Years and Above											
	VR-AD-1005 STUDY	A Randomized, booble-binded, Pracebe-Controlled, Pracebe-Controlled, Pracebe-Controlled, Fracebe-Controlled, Fracebe-Controlle											
145	VERTEX	A Phase 2/3 Adaptive, double-blind, placebo-controlled study to evaluate the efficacy and safety of VX-147 in Subjects Aged 18 Years and Older with APOL1-mediated Proteinuric Kidney Disease											
	WOMAN YAWS	Tranexamic Acid For The Treatment Of Postpartum Haemorrhage: An International, Randomized, Double Blind, Placebo Controlled Trial Single Dose Oral Azithromycin Versus Injection Benzathine Penicillin For The Treatment Of Yaws – A Randomized Clinical Trial In Some Endemic Communities In Ghana											
148	ZEBOV	A Phase 1 Study to Evaluate the Safety, Tolerability and Immunogenicity of Heterologous Prime-Boost Regimens Using MVA-BN®-FILO and Ad26.ZEBOV Administered in Different Sequences and Schedules in Healthy Adults											
149	ZEBOV 2	A Randomised, Observer-blind, Placebo-controlled, Phase 2 Study to Evaluate the Safety, Tolerability and Immunogenicity of Three Prime-boost Regimens of the Candidate Prophylactic Vaccines for Ebola AD26ZEBOV and MVA-BN-Filo in Healthy Adults, Including Elderly											
	ZIV AFFLIBERCEPT	Phase I, Safety of ZIV-AFLIBERCEPT in retinal diseases in Ghanaian population											
151 152	2 N/A	Feasibility Studies Study not Started/ Application Withdrawn /Not Approved / Terminated / FDA Dissociation from Trial data											
153	NYN	Not yet known
